BCL2Fastq Q30 percentage

Boxplots showing the percentage of bases \geq Q30. Values within each boxplot are for each lane. This shows how well the base calling has performed on the sequencer.

Picard Insert Sizes

Boxplots showing the range and spread of insert sizes. This will highlight DNA fragmentation.

on_target_vs_selected

The % of on and near bait bases that are on as opposed to near (as defined by the BED file containing the capture regions..

target_bases_at_20X

Boxplot showing the % of bases in the target regions which are covered at $\geq 20\times$. Samples below 90% are failed. Samples above 95% pass. Samples between 90-95% may be analysed with caution.

Contamination

The contamination estimate as calculated by VerifyBAMID (FREEMIX). A sample is considered contaminated when FREEMIX > 0.03.
